## AFFIDAVIT

I, Scott Gruber, of the City of Kitchener, the Regional Municipality of Waterloo, in the Province of Ontario, MAKE OATH AND SAY AS FOLLOWS:

1. I am the President of Miller's Electric Limited, an electrical contracting company and repairer lien claimant. As such, I have knowledge of the matters hereinafter deposed to.
2. Miller's Electric has been in business for over 50 years and has been the primary electrical contractor for ATS Automation for at least 30 years.
3. On or about July 1, 2009, I received a telephone call from Sohil Sheth, maintenance manager for ATS Automation advising me that ATS had sold their plastics components division that the majority of the production equipment, which was comprised of numerous machines of varying sizes, had to be moved to a new location in Cambridge.

4. Mr. Sohil asked me for our hourly charge out rates and mark ups on materials. I provided the information he requested and within the following weeks was advised verbally that Miller's Electric was awarded the job that I was to meet at the new facility located at 1574 Eagle Street in Cambridge with Mr. Sohil Sheth and Barry Laing, the project manager who was in charge of the move of the machines.
5. I did receive a purchase order or any other documentation confirming the agreement. I was not concerned about the absence of paper work as I trusted Sohil from ATS based on our history.
6. On August 17, 2009, Miller Electric forces attended at ATS Tooling to begin the process of disconnecting the machinery that made up the Plastic Injection Moulding line so that it could be moved to the new location.
7. The production equipment operated on electricity however the source of the electricity used large transformers which took the electricity from the building which was 600 volts and stepped the voltage down to 220, 380 or 480.
8. The electricity as fed to the machines at ATS Automation by way of a large, thick, multi-conductor cable which was housed in a trench located throughout the floor for of the ATS Automation Plant. The cables at ATS Automation were removed but the equipment had to be safely disconnected and isolated from the power cables.
9. Once all of the equipment was safely disconnected from the power, a specialized millwright company transported the equipment to the Respondent's location on Eagle Street.
10. Miller's Electric was responsible for disconnecting every piece of equipment sold by ATS Automation to the Respondent. Attached hereto and marked as exhibit "A" is a

copy of the Public Auction Advertisement which provides pictures of some of the equipment and a complete list of all of the equipment that was transported from ATS Automation to the Respondent's business.

11. The approximated billing for the work performed at ATS Automation was about less than \$20,000.00 however, I did not submit a specific billing for this part of the projection.
12. At the same time as we were disconnecting the equipment at ATS Automation, we were working on the electrical system on Eagle Street so that the subject equipment could be rewired and re-connected.
13. The building on Eagle Street had the standard main service electrical switch board that one would find in any industrial facility.
14. Miller Electrical removed the Multiple Power Bus Ducts at ATS Automation and re-installed at Eagle Street which was a central power source for all of the subject equipment.
15. Miller Electric installed large, thick power cables from the main electrical switch board to Multiple Power Bus Ducts which then provided the 600 volt power to the various transformers which in turn provided the correct voltages to the various machines that formed the production equipment which the respondent purchased.
16. Miller Electric forces then proceeded to connect each piece of equipment to the corresponding transformer so that the proper voltage of electricity could be provided to each piece of equipment so that the machine could operate.
17. I have prepared a spread sheet which lists all of the equipment upon which Miller Electric forces provided services and the approximate value of the work performed

as it related to each piece of equipment. Attached hereto and marked as exhibit "B" is a copy of the said spread sheet.

18. Miller Electric's outstanding balance for all worked performed is \$286,831.55.

Attached hereto and Marked as exhibit "C" is a copy of the statement of account the outstanding invoices.

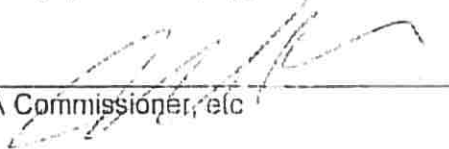

19. As indicated in the statement of account, the Respondent owed me a significant amount of money and I instructed my solicitors to register a Repair's Lien Attached hereto and marked as Exhibit "D" is a copy of the Financing Statement.

20. I carefully reviewed the invoices and I now conclude that invoices 8452, 8704, 8729, 8584, 8585, 8587, and 8690 were not related to repair work to specific pieces of equipment and therefore not the subject matter of a Repairer's Lien. Accordingly the amount of the lien should be reduced to \$ 275, 905.42 and the balance should form part of an unsecured claim.

21. There is no dispute that Miller's Electric is owed the sum of \$286,831.55 and the Respondent has acknowledged that amount as owing as evidenced in the Notice and Statement of the Receiver dated May 17, 2010. Attached hereto and Marked as Exhibit "E" is a copy of the subject notice.

22. I make this affidavit in support of a motion to have the monies currently held by the Receiver paid to Miller's Electric Limited and for no improper purpose.
